Projects

- Create a Memory puzzle game (HTML, CSS and JavaScript) [Link here](#)
Features
 - Matching imagers:
 - Shuffle the images and arrange them face-down in a grid.
 - The 6 different images must match with each pair.
 - Score:
 - For each successful match, user can earn points.
 - Users' memory skill can check by the final total score.
- Create a Wacky Tales Weaver Game (HTML, CSS and JavaScript) [Link here](#)
Features
 - Story books:
 - Display a grid of clickable images (representing different stories).
 - When a user clicks on an image, the corresponding story unfolds.
 - Each story can have text, images, or animations.
 - Users can explore multiple stories by clicking different images.
 - The game displays different stories by clicks the images.
 - Restart option:
 - When users click the restart button, the game resets, allowing them to read the stories again from the beginning
- Weather Dashboard Application Using (HTML, CSS and JavaScript) [Link here](#)
Features
 - Real-time weather data:
 - The application fetches and displays real-time weather data including temperature, humidity, wind speed, and more.
 - Search functionality:
 - Millions of locations are supported.
 - Lightweight JSON format.
